SUMMARY

Senior Frontend Engineer with 6+ years of experience building production React and TypeScript products, including a data-intensive platform used by 100K+ users. Strong record of translating complex business workflows into maintainable component architectures, improving frontend performance, integrating APIs, and strengthening data accuracy and release quality through automated testing. Experienced in cross-functional delivery with backend engineers and designers, with additional end-to-end product ownership across independent full-stack applications.

EXPERIENCE

React Developer (Jul 2022 – Mar 2025)

Pardco – GS1 · on-site, full-time

- Engineered a high-traffic admin platform for 100K+ users, enabling real-time GS1 code (GLN/GTIN) management, advanced data visualization, and live operational tracking using React and TypeScript.
- Rebuilt a legacy monolithic UI from scratch with React, Material UI, Zustand, and React Query — reducing codebase size by 20% through a modular component architecture and custom reusable hooks.
- Optimized API data fetching by implementing React Query caching and request deduplication, cutting redundant network calls by ~40% and significantly improving perceived page performance.
- Developed 30+ accessible, responsive UI components with Material UI and Tailwind CSS, standardizing design patterns across the codebase and reducing time-to-feature delivery by an estimated 25%.
- Implemented role-based access control (RBAC) and secure session handling, hardening platform security for sensitive GS1 data across multiple user permission levels.
- Achieved 85%+ unit test coverage using Jest and React Testing Library, reducing production bug reports by 30% and accelerating release confidence through automated regression checks.

Frontend Developer (Apr 2020 – Jun 2022)

Hamiket · on-site, full-time

- Collaborated within a cross-functional team of frontend developers, backend engineers, and UI/UX designers to architect and deliver a multi-panel marketplace platform (Customer, Vendor, Support) using Next.js and React, consistently meeting sprint deadlines across all three panels.
- Partnered closely with backend developers to integrate RESTful APIs via Axios, implementing centralized interceptors for authentication, error handling, and request/response standardization — reducing integration friction and improving delivery speed across feature cycles.
- Worked alongside UI/UX designers to translate Figma designs into responsive, pixel-perfect interfaces using Material UI and SCSS, while contributing to a real-time chat feature via Socket.IO — all shipped on schedule as part of planned sprints.

Web Developer (Jan 2019 – Mar 2020)

TarisGold – Multi-Vendor Platform · on-site, full-time

- Automated live gold price synchronization via a third-party API integration, eliminating 95%+ of manual pricing errors and ensuring real-time pricing accuracy across thousands of daily transactions.
- Optimized the website's performance by reducing request size by 25% and improving the Lighthouse score from 65 to 90.

SELECTED PROJECTS

Psychology Clinic Platform — Full-Stack Web Application

Independent project · Next.js 15, TypeScript, Supabase, PostgreSQL, Node.js, Express, Docker, Kubernetes, GCP

- Designed and built a mobile-first platform end-to-end with Google authentication, role-based dashboards, appointment booking, psychological test workflows, messaging, content management, and payment tracking.
- Designed the PostgreSQL schema and Row Level Security policies, and built role-based dashboards for patients, doctors, and admins covering scheduling, clinical notes, blog CMS, messaging, and payment tracking.
- Built backend services with Node.js and Express, containerized with Docker and orchestrated via Kubernetes, and deployed on Google Cloud Platform (GCP) alongside a Vercel-ready frontend deployment.
- Implemented protected routes, global loading states, and full SEO setup (metadata, sitemap, robots, Open Graph).

Andormera — AI Rental Platform

Independent project · Next.js, TypeScript, Zustand, Gemini AI, Tailwind CSS, Node.js, Express, GCP, Kubernetes

- Built a real estate listing platform with an admin dashboard for managing properties and inquiries, and a verified-listing publishing workflow.
- Integrated the Gemini AI API to auto-generate multilingual property descriptions, shipping an AI-powered feature into a live, user-facing product.
- Developed backend services with Node.js and Express, deployed and orchestrated using Docker, Kubernetes, and Google Cloud Platform (GCP) for scalable, containerized hosting.

SKILLS

Frontend: TypeScript, JavaScript (ES6+), React.js, Next.js, HTML5, CSS3

UI & Styling: Material UI, Tailwind CSS, shadcn/ui, Sass

State & Data: Redux, Redux Toolkit, Zustand, React Query, REST APIs, Socket.IO

Backend: Node.js, Express, NestJS

Cloud & DevOps: Google Cloud Platform (GCP), Docker, Kubernetes (working knowledge), Git, GitHub Actions, CI/CD

Testing: Jest, React Testing Library, Storybook

EDUCATION

Master's in Data Science, AI – Gisma University of Applied Sciences (Apr 2025 – Apr 2026)

Bachelor's in Civil Engineering – University of Kurdistan (Sep 2012 – Jul 2018)

LANGUAGES

English (Proficient) German (Intermediate: B1, in progress)
